Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The applicant states in claims 2 and 3 "in which a high resolution image is resampled" Examiner believes this is a mistake and should be a low resolution image as stated in the specification on page 4 in paragraphs 4 and 5. Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Hassan et al., U.S. Patent No. 5,940,117.

7. As per claim 1, Hassan discloses an image display apparatus which combines low and high resolution image data in a common data format prior to display (abstract and fig. 5 and column 1 lines 58-68 and column 2 lines 1-12).

8. As per claim 4, Hassan discloses in which the composite imagery is stored in a frame buffer (fig. 5 # 103).

Claim Rejections - 35 USC § 103

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

11. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hassan et al in view of Thompson et al., U.S. Patent No. 5,600,347.

12. As per claim 2, Hassan does not specifically in which a high resolution image is resampled to increase the pixel count to that of the highest resolution imagery. However, Thompson does disclose this in the abstract and column 2 lines 45-57. This would have been obvious to one of ordinary skill in the art at the time the invention was made because this would have reduced cost by saving memory requirements (column 2 lines 63-65).

13. As per claim 3, Hassan does not specifically disclose in which a high resolution image is interpolated to increase the pixel count to that of the highest resolution imagery. However, Thompson does disclose this in the abstract and column 2 lines 45-57. This would have been obvious to one of ordinary skill in the art at the time the invention was made because this would have reduced cost by saving memory requirements (column 2 lines 63-65).

14. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hassan in view of Lauer et al., U.S. Patent No. 5,523,769.

15. As per claim 5, Hassan does not specifically disclose in which the frame buffer is segmented to drive a matrix of display devices. However, this is disclosed in Lauer et al in fig. 1a and 2a and column 5 lines 3-15 and column 6 lines 51-61. It would have been obvious to one of ordinary skill in the art at the

time the invention was made to use a frame buffer to drive a matrix of displays as in Lauer with the system of Hassan because this would allow having higher resolution displays (column 1 lines 16-26).
